

## TIMBER FINISHING SERVICE

### BESPOKE TIMBER FINISHING FROM ARNOLD LAVER

Finishing timber is a key part of the manufacturing process; the key to ensuring timber performs and is long-lasting for both exterior and interior applications, is selecting the optimum coating system for the end-use.

**PROTECTION:** Timber finishings add a protective barrier to the timber, which, in addition to the technical design and structural make-up of the timber, makes it last longer, whilst maintaining the timbers' natural appearance and value.

Arnold Laver offers a range of factory applied finishes from industry leading coating manufacturers which allows us to offer tailored solutions, meeting customer-specific requirements.

**PREMIUM COATINGS:** We offer an extensive range of beautiful colours and stains and can produce finishes to match most RAL colours, creating the perfect finish for our customers.

**TIME SAVING:** Our timber coatings and finishing service allows installation, finishing time and cost to be significantly reduced.

## INTERIOR PRIMING

Our professional priming service for internal joinery products such as architraves, skirtings and door linings prepares the material for a top-coat - saving the time required to finish on-site.

We offer a single-coat priming finish as a standard. However, some of the other priming options we can offer include: multi-coat, sanded, de-nibbed and a knotting service.

## INTERIOR LACQUER

We offer a two-coat clear lacquer finish for application on interior joinery products.

Our standard lacquer finish is set to either a 20% sheen or an 80% sheen.

A range of translucent base stains are also available which can be applied prior to lacquering.

## EXTERIOR WOOD STAINS

We offer wide range of translucent colours and opaque stains which can be colour-matched to any RAL colour and used for exterior solutions such as cladding.

Our quality wood stain finishes provide durability and protect against discolouration, fungi and UV-light upon application.

For less durable species we would recommend pressure treatment first.

## EXTERIOR BASE COAT / TOP COAT

We offer a wide range of base-coat and top-coat solutions for exterior application; including a range of translucent colours and opaque stains which can be colour-matched to most RAL colours.

Prior to application of the base coats / Top coats - all material is sanded.

Translucent base-coats / top-coats then receive a tinted preservative base-coat which contains UV inhibitors followed by 2 coats of exterior top-coat. Opaque colours receive 3 coats of exterior top-coat after sanding.
